Professional Summary

AI-focused Computer Science student with a strong foundation in Large Language Models (LLMs), Natural Language Processing (NLP), and Generative AI. Highly interested in the agentic AI revolution and building autonomous AI solutions. Skilled in prompt engineering, integrating AI models via APIs (OpenAI), and developing scalable conversational interfaces. Self-motivated with strong analytical abilities, eager to contribute to cutting-edge AI implementations and optimize intelligent agents for high-growth environments.

Achievements

- Secured **2nd Runner-Up** at the **JSSATE Hackathon** for developing an innovative problem-solving software solution.
- Solved **300+** **Data Structures and Algorithms problems** across coding platforms, demonstrating strong analytical and problem-solving abilities.

Projects

Autonomous RAG-Based Conversational QA System | *Python, FastAPI, LangChain, OpenAI API, Qdrant, Docker* 2025

- Built an end-to-end Retrieval-Augmented Generation (RAG) pipeline enabling intelligent, context-aware conversational querying.
- Implemented advanced prompt engineering techniques to optimize LLM response accuracy and conversational flow.
- Integrated OpenAI APIs and Qdrant vector database for semantic search and efficient, real-time retrieval.
- Developed scalable REST APIs using FastAPI to handle real-time user queries and seamless frontend integration.
- Applied document chunking and embedding strategies to improve retrieval relevance by ~25%.
- Containerized the application using Docker and structured it for deployment-ready environments.

Task Management Web Application (Backend Integrations) | *Django, Python, SQLite* 2026

- Developed a scalable web-based task management system, focusing on efficient backend handling and data routing.
- Implemented RESTful APIs for CRUD operations, laying a strong architectural foundation for third-party API and AI integrations.

Technical Skills

AI & Machine Learning: Large Language Models (LLMs), Natural Language Processing (NLP), Prompt Engineering, Conversational AI, Generative AI, Retrieval-Augmented Generation (RAG), Hugging Face Transformers, Machine Learning

Languages & Frameworks: Python, C++, JavaScript, FastAPI, Django, RESTful APIs

Tools & Platforms: OpenAI API, LangChain, Qdrant, Postman, Git, GitHub

Core CS: Data Structures & Algorithms, Operating Systems, DBMS

Education

B.E. in Computer Science and Engineering

JSS Academy of Technical Education, Bengaluru

2023 – 2027

Relevant Coursework: Artificial Intelligence, Machine Learning, Natural Language Processing

CGPA: 8.14/10
